**OPR: NHQ CAP/EXAI
DATE: 1 Aug 2002**

Possible CI Grades & Important Terms

Outstanding (O): Performance or operation far exceeds mission requirements. Procedures and activities are carried out in a far superior manner. Resources and programs are very efficiently managed and are of exceptional merit. Few, if any, deficiencies exist.

Excellent (E): Performance or operation exceeds mission requirements. Procedures and activities are carried out in a superior manner. Resources and programs are very efficiently managed and relatively free of deficiencies.

Satisfactory (S): Performance or operation meets mission requirements. Procedures and activities are carried out in an effective and competent manner. Resources and programs are efficiently managed. Minor deficiencies may exist, but do not impede or limit mission accomplishment.

Marginal (M): Performance or operation does not meet some mission requirements. Procedures and activities are not carried out in an efficient manner. Resources and programs are not efficiently managed. Deficiencies exist that impede or limit mission accomplishment.

Unsatisfactory (U): Performance or operation does not meet mission requirements. Procedures and activities are not carried out in an adequate manner. Resources and programs are not adequately managed. Significant deficiencies exist that preclude or seriously limit mission accomplishment, or endanger personnel or resources.

Benchmark Candidate--The best of the best processes observed and researched to date by the assessment team to be considered for emulation by other units.

Commendable Item--A highly effective concept, technique, or management practice not observed in other units or significantly better than those found in other units.

Observation--A minor deficiency documented to place emphasis on the need for resolution before it develops into a more serious problem, to provide crossfeed to other units or to act as an indicator of overall unit health.

Finding--A significant deficiency that requires specific answers to CAP-USAF on actions taken to correct the deficiency. In the report, a finding is identified by either a single asterisk (*) or, if potential for Fraud, Waste and Abuse (FWA) exists, a double asterisk (**). Units must answer findings with enough detail to permit the HQ CAP and CAP-USAF staffs to determine the adequacy of corrective actions and provide assistance as required. See CAPR 123-3 and CAP-USAFI 90-201 details.

Repeat Finding--A finding reported in the units previous IG inspection report or recent audit agency report, which was subsequently closed, which exists again during the current assessment. Repeat findings are normally answerable findings.

Open Item--An answerable finding from a prior assessment in which the unit or higher headquarters' corrective actions are incomplete and NHQ and CAP-USAF has not closed the item. Corrective action progress is evaluated and documented in the report. If corrective actions were complete, but not reported, and the inspector determined the problem or deficiency solved, the open item is closed, indicating that no further actions

required. If corrective actions are incomplete or inadequate, the item remains open. Open items are not repeat write-ups.

SUBJECT: Wing Inspection Guide

1. Attached is the new CAP Subordinate Unit Inspection Guide. This guide reflects a minimum list for inspections of units below the wing level. Wings may add items as local conditions and/or policies require. Functional tabs that do not pertain to a unit may be skipped. For example, a unit without an aircraft would not be subject to the Aircraft Management tab. Each unit will be provided one copy of this guide. The guide is also available for review and download on the NHQ website. Local reproduction and distribution is encouraged.
2. See the inside back cover for making recommendations for changes. **Changes will be published by inserting pages into the Inspection Guide on the NHQ website and then notifying all region and wing commanders, as well as units and liaison offices.** Commanders and staff officers will then be responsible for downloading the changes from the NHQ website.
3. Questions concerning this guide should be directed to NHQ CAP/EXAI

Instructions for use of the CAP Aircraft Inspection Checklist

The CAPF 71 is designed to assist the inspector in determining the overall condition of the aircraft, as well as ensuring compliance of FAA and CAP regulations and directives.

1. Aircraft Records.

Item a. Airworthiness Directive Listing in Logbook: FAR 91.417 requires the aircraft records (logbooks) to contain the current status of applicable airworthiness directives, the method of compliance, the AD number, revision date, and recurring action if required. The A&P / AI should have performed and documented all applicable ADs as part of the 100-hour or annual inspection and updated the compliance listing in the maintenance logs.

Item b. Equip List (CAPF 37) Matches Installed Equipment: HQ CAP requires all wings to account for equipment installed in aircraft, such as radios, on a CAPF 37. Confirm the CAPF 37 is complete and matches the type equipment installed in the aircraft. Verification of serial numbers is not required.

Items c1), c2), and c3). Instrument Requirements: FAR par 91.411 and 91.413 requires the altimeter, pitot static and transponder to be tested and inspected every 24 months. The inspection dates are annotated in the airframe logbook, which usually are not kept in the aircraft. The maintenance officer or unit commander controlling this aircraft can provide you the records. **Item c4). VOR Check:** The VOR check is required by FAR 91.207 to be accomplished prior to the flight or within the preceding 30 days if the aircraft is to be operated under IFR. The pilot can accomplish this test by checking the VOR against a designated VOR checkpoint on the ground or by flying over a prominent ground point, or if the aircraft has dual VORs by checking them against each other. When performing the check, the pilot should record the date, place, bearing errors and sign the log or record. The aircraft cannot be flown IFR if this check has not been performed or logged!

Item c5). ELT Battery: FAR 91-207 requires the expiration date of the ELT battery be legibly marked on the outside of the transmitter and entered in the aircraft logbook. FAR 91-207 requires ELTs to be inspected during the aircraft annual inspection and this inspection annotated in the aircraft logbook.

2. Aircraft Interior.

Item a. Check for obvious defects, leaks, corrosion, cleanliness, and condition of interior.

Items b, c, d, and e. Placards: Not for Hire/Maximum Crosswind/Cessna Seat Slippage Warning/Operating Limits. Ensure these placards are properly installed and visible. These placards can be ordered through the CAP Supply Depot in Amarillo TX.

Item f. Avionics and Control Locks Installed: Assure the avionics and control locks are installed. Aircraft radio & nav equipment are very expensive and can be easily stolen. The hole drilled in the control column for installation of the control lock should be centered to assure the flight controls are locked in the neutral position. On many Piper aircraft, the seat belt is used to hold the flight controls in a static position versus the use of a control lock.

Item g. Fire Extinguisher: Check that one is installed and serviceable (in the correct range).

Item h. Shoulder Harness: CAPR 66-1 states that all CAP corporate aircraft will have shoulder harnesses for the pilot and co-pilot positions. Newly assigned aircraft have 90 days to have them installed; after 90 days, the aircraft is grounded until they are installed. FAR 91.205 also requires shoulder harnesses on aircraft manufactured after July 18, 1978.

Item i. Carbon Monoxide Detectors: For safety, disposable 12- to 18-month carbon monoxide detectors will be installed in all CAP-owned aircraft. Inspect detectors for serviceability (change of indicator color) and valid expiration date. These detectors will be replaced every 12 months

Item j. Cessna Seat Rail Condition: The Cessna seat rails must be checked for overall condition. Check specifically for any cracks in the rails or runners. If any cracks or questionable defects are found, have an A&P mechanic inspect it for serviceability. Also, check for elongation of the holes on the rails, seat locking pin rounding and roller washer wear.

Item k. Secondary Seat Stop Installed (All Cessna Aircraft, Excluding 172R and Older Models): The secondary seat stop requirement is required for all Cessna aircraft, excluding the 172R and later models. Cessna redesigned the seat rails on this model, eliminating the requirement. The secondary seat stop is installed on the right side of the pilot's seat (left front seat) to prevent it from sliding if the seat pin fails. This is a HQ CAP mandatory equipment requirement.

Item l. Cargo Tie-down or Cargo Net: FAR 91.525 requires cargo to be properly secured by a safety belt or other tie-down method having enough strength to eliminate the possibility of shifting during operation. Cargo net is recommended for the cargo compartment.

Items m1) and m2). Airworthiness Certificate and Registration: These items are normally kept together and mounted in a pouch attached to a sidewall of the aircraft. The Airworthiness Certificate is issued when the aircraft is manufactured, the registration is issued with a change in ownership (i.e., when HQ CAP purchased it). The Radio License is no longer required for operations inside the US.

Items m3) and m4). Operating Handbook & Weight & Balance: FAR 91-9 requires each aircraft to have an operating handbook and displayed operating limits in the form of placards or instrument markings. Ensure the ones required for the specific aircraft you are inspecting are up-to-date (for example, has all the latest equipment added to the aircraft been reflected in the weight & balance data?). Ensure a flight manual, matching the make/model/year of the aircraft, is kept in the aircraft. Check the book for condition, i.e., loose, torn, or missing pages. Ensure the weight and balance data sheets are posted in the book.

Item n. Survival Kit. Assure a survival kit has been established and is available during every flight.

3. Aircraft Exterior.

Item a. Properly Chocked, Tie-Down Method/Condition of Ropes: All aircraft, when not being operated, are required to be properly chocked and secured. The aircraft should also be tied down at 3 points. Chains may be used providing the chain is not directly attached to the ground anchor point. This configuration will damage the wing spars because there is no flexibility during wind gusts. Nylon rope with at least a 3,000 lbs. tensile strength is recommended.

Item b. Exterior Corrosion: HQ CAP emphasizes an aggressive aircraft corrosion prevention program and provides ACF-50 corrosion inhibitor, free to CAP units, to be sprayed on the aircraft. Note any corrosion you find. It is expensive to repair; however, it is less expensive to repair if caught early. This is the most important item to check during your inspection. The primary purpose of paint is to prevent corrosion with a secondary purpose of enhancing appearance. Therefore, look closely for corrosion, and missing or chipped paint. Units need to do touch-up painting on their aircraft and not just let them deteriorate. Corrosion can best be checked by removing an access panel on the leading edge area of the wing and visually looking for corrosion or by looking at exposed metal inside the aircraft such as under carpets. Check for cracks in the aircraft skin. If a crack is detected and has a hole drilled at the progressive end of the crack, this is OK. It is a previous repair called "stop drill" and is designed to stop the crack from progressing any further. If, however, the crack has not been stop drilled or the crack has progressed, it should be repaired.

Item c. Condition of Propeller. Inspect propeller, paying particular attention to nicks and evidence of stress (blade trailing edge wavy) on the propeller. Also check for excessive rubbing marks between spinner and cowling.

Item d. External Identification Plate: FAR 45-11 requires a fireproof plate that is etched, stamped, or engraved with the builder's name, model designation, and serial number. It must be secured to the exterior of the aircraft near the tail surfaces or adjacent or just aft of the rear-most entrance door. If the aircraft was manufactured before March 7, 1988, the plate can be attached to an accessible interior or exterior location near an entrance; however, the model designation and serial number must also be displayed on the aircraft fuselage exterior.

Item e. CAP Seal. A CAP seal must be installed on the vertical stabilizer of all CAP aircraft.

Item f. Brakes. Check brakes and brake lines for leaks, wear, and obvious defects.

Item g. Tires. Check tires for proper air pressure and serviceability.

Item h. Engine Cowling Fit & Fastener Condition: Check the cowling for proper fit and contour. Check the condition of the fasteners holding it in place. Loose, improper, or defective fasteners or nutplates could cause the cowling to separate during flight.

Item i. Door Hinge Pins (Cessna): Check the door hinges for proper hinge pins. Only authorized Cessna hinge pins will be installed in CAP aircraft. Cotter pins, quick release pins, nails, etc., will not be used and are easily identifiable. For reference only, the correct part numbers are: Cessna 172 upper hinge pin - P/N 0711001-59; Cessna 172 lower hinge pin - P/N 0517019-12; Cessna 182 upper and lower hinge pin - P/N 0711038-1

4. Exterior and Interior Lighting for Proper Operation

Items a, b, c, d, e, and f. Exterior Lighting for Operation: Check all lights for operation. You may do this by turning on the master switch and all lights.

Most of the items on the checklist are self explanatory. The dates and times for the aircraft is annual, 100-hour inspections, and oil changes should be in the aircraft logbooks. Tach times should be used to determine when maintenance actions are required. POC for this checklist is HQ CAP-USAFLGM, Maxwell AFB AL (334) 953-6032 or DSN 493-6032.
